About this book

"Wheels is a photographic journey through the junk yard, field, or prairie of old wagons and autos from a past era. The buckboard and model T's are returning to nature; embraced by weeds and vines, eroded by wind and rain. They are no longer of use. Left to the elements, they slowly transform into habitats for coyotes, rabbits and mice. They become a part of the wild terrain, a mystery on the landscape.

-Rain

In a forty year span of traveling around the country photographing nature, I encountered many hidden relics of the past; abandoned autos and old wagons from the pioneer west days. I photographed them as still life portraits of a time past. Not using an academic approach with specific year and model names. But, like an old horse and mule put out to pasture, these photographs have a nostalgic view of two modes, work and transportation.

These scenes were my discoveries. I had to muse and figure out my own testimonials. What happened here? This old car out on the prairie, this wagon in the tall grasses?

I hope you can discover some of the same romance and nostalgia I felt when exploring these scenes. Take your time, have an adventure sojourning through these images of “Wheels” gone by.
